
Update and cake moments

SmartAgents · Isabel · 6 October 2026

Ponto update

In sync with the latest release

All existing work is kept in step with the latest release.

Libraries updated

Every related library is up to date, which closes 2 CVEs.

Coaching session

Today.

First autonomous agent

Gathering feedback on the code reviewer.

Cake moments

A test suite for the FICs	The developers are happy with it. A full run takes about 20 minutes.
Maintenance burned down	The suite made Ruby and library upgrades safe to make. A big chunk is done.
Historical issues resolved	5 found and fixed so far, and counting.
The latest models on Izzy	The -latest suffix makes the newest model the easy choice.
Changelog generation	The first version is in place.

Not technical

...and more important.

What is changing in the people, not in the code.

What we are hearing

Learning at home

One person bought a Claude subscription to try it out at home.

A homelab with AI

One person is setting up a homelab with AI.

Cheaper models by default

One person changed their workflow and reaches for cheaper models first.

Working on quality

One person told us they are working on quality now, starting with tests.

People who were sceptical are starting to trust AI.

The road to an AI-native SDLC at Isabel

August	September	October	November	December
Learn from within	A first gate	A first agent	A shared baseline	Beyond two teams
Start inside Ponto and Trustees, to find out what an AI-native SDLC takes.	Every FIC under test. The proposal: quality gates, a platform, training.	Trajectory made clear. One autonomous agent. Ponto upgrades released.	Standards and gates in one place, loaded by the agents of both teams.	What worked, put up for discussion across the organisation.

November and December are our proposal.

Thank you
