
Update and cake moments

Ponto update

In sync with the latest release

All existing work is kept up to date with the latest release.

Libraries updated

Every related library is up to date, which closes 2 CVEs.

Coaching session

Today.

First autonomous agent

Gathering feedback on the code reviewer.

Cake moments

A test suite for the FICs

The developers are happy with it. A full run takes about 20 minutes.

Maintenance burned down

The suite made Ruby and library upgrades safe to make. A big chunk is done.

Historical issues resolved

5 found and fixed so far, and counting.

More cake moments

The latest models on Izzy

The -latest suffix makes the newest model the easy choice.

Changelog generation

The first version is in place.

Release notes for analysts

An automated release notes plugin, built for the analyst team.

Spec-driven development

We helped set up the spec-driven flow for the backtesting app of the Trustees analysis engine.

Not technical

...and more important.

What is changing in the people, not in the code.

What we are hearing

Learning at home

Someone bought a Claude subscription to try it out at home.

A homelab with AI

A colleague is setting one up at home.

Picking the right model

More thought goes into which model to use, even beyond Claude.

Working on quality

One person told us they now put quality first, starting with tests.

Backing for a gated setup

We feel like dev, ops and management are starting to agree with our approach.

People who were sceptical are starting to trust AI.

The road to an AI-native SDLC at Isabel

August

Start in Ponto

Start inside Ponto, to find out what an AI-native SDLC takes.

September

A first gate

Expand to Trustees to learn from within. Map the AI-native SDLC on Isabel and deliver a first gate: every FIC in Ponto under test.

October

A first agent

Trajectory made clear.
One autonomous agent.
Ponto upgrades released.

November

A shared baseline

Standards and gates in one place, loaded by the agents of selected teams. In parallel, the platform team expands the central agentic capability.

December

Beyond the first teams

Share what worked and discuss it across the organisation.

November and December are our proposal.

Thank you
